Combatting Dashboard Fatigue

Get your KPIs with Voice-Powered Queries using AWS

Motivation

Dashboards can contain a lot of information which might not pertain to the current situation. Users must sift through a lot of information to retrieve their required KPI(s) which might not be in a single dashboard. Time and brain power is wasted. Enter Voice-Powered Queries via AWS! Now, get your KPIs on the go with a single voice command.

How it works:

AWS Backend

Alexa, What are our app downloads for this weeks?

Our app downloads for this week are X hundred thousands. This represents a 3.3% increase than the previous week downloads

Benefits

Dashboards

Information overload

Steep learning curve

Using Alexa

Flexibility in accessing relevant KPIs

Simply Ask Alexa

Voice Pipeline

Lambda retrieves data from DynamoDB

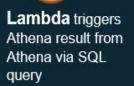

Athena query data in S3

\$3 stores data

CW Events is scheduled to run commands on X intervals

Business Applications

Organization-centric

Sales & Marketing

- What is our YTD sales volume for product X?
- 2019?

Operational Excellence

- What is the current average customer

Customer-facing

Public Spaces

- What are the coffee shop hours?
- Where is the non-fiction section?

Private Business

- What time of day do most people
- What is the highest rated dish on the menu?
